Profile

Software Engineering graduate with experience in front-end web development. Built responsive and user-friendly websites using React.js and Next.js, focusing on performance and clean, component-based architecture. Led the front-end of an AI-powered mental health app using Flutter, which won 1st place in the department. Skilled in creating intuitive interfaces and optimizing web performance

---

Education

Bachelor's Degree, Software Engineering   **Oct 2021 - Jun 2025**
Alexandria University
Activities: ICPC - International Collegiate Programming Contest

---

Experience

Freelance Front-End Developer   **Nov 2025 – current**

Redesigned and optimized the homepage of an e-commerce store to improve visual clarity, user flow, and conversion rates. Implemented performance-focused image optimization across the site, reducing load times while maintaining high visual quality. Built custom offer funnels using WordPress and Elementor, including single-page purchase flows with advanced upselling and product bundling logic to increase average order value. Developed interactive UI components and offer selectors with custom JavaScript to enhance the buying experience. Ensured full responsiveness and consistent behavior across mobile and desktop devices.
